S-lon Roofing Sheets

S-lon Roofing is an alternative to health hazardous and heat trapping traditional roofing. It creates a pleasant atmosphere within your home or office space, while providing durability and easy installation.

S-lon Roofing Sheets are made using advanced polymers, to make a Recyclable Eco-friendly product which does not need additional heat and sound insulation and does not pose any health hazards. It fuses traditional roofing designs with color to enable revolutionary eye-catching construction.

S-lon Roofing Sheets is yet another quality product from the House of S-lon.

Key Features and benefits of S-lon Roofing Sheets

1. S-lon roofing sheets do not contain radioactive or carcinogenic components. They are fully recyclable at the end of their life span in compliance with the green environmental protection requirement.
2. Resistant to both colour and shape deformations, observed in laboratory test up to 2000 hour UV exposure and 70° C.
3. Low thermal conductivity provides excellent insulation against heat loss or gain. With a very low thermal conductivity of less than 0.09(m.K) at 70° C this roofing sheet can thermally insulate an area without the need for extra insulation materials.
4. S-lon roofing sheet has superior sound insulation properties protecting against external noise. Sounds of heavy rain and high winds are muffled well.
5. Lightweight materials make installation quick and easy. S-lon roofing sheet has an effective width of 960mm and customer specified lengths (which can be contracted) to give high pavement efficiency. Together with light weight, it is easy to load and unload with complete installation fittings supplied together.
6. No additional heat or sound insulation is required, lowering installation cost.
7. Withstands harsh weather and climatic conditions.
8. Fire retardant properties. S-lon roofing sheets are in the B1 flammability class. When the sheets come into contact with open flame, it does not ignite and spread. S-lon roofing sheet increase the building safety compared to materials containing bitumen and polyurethane insulation.
9. High tensile strength and impact Strength provides strong resistance to falling objects. S-lon roofing sheets have strength and resilience and can resist a falling 1kg steel object with a sharp point from a 3 meter height.
10. Excellent self-cleaning properties prevent accumulation of dirt and dust. S-lon roofing sheet has a compact and smooth surface, therefore the surface has the 'lotus effect', which prevents the accumulation of dust and it is as clean as new after being rinsed by rain water.
11. Can be fitted on both wood and steel roofing structures.
12. The outer and inner surfaces of S-lon roofing sheets have excellent corrosion resistance performance against any corrosive elements and it is resistant to acid, salt, alkaline and various other chemicals for long time.
13. Guaranteed waterproofing quality of S-lon roofing sheets provides high weather resistance.
14. S-lon roofing sheets are manufactured in Sri Lanka conforming to international standards.
